## Oman Air Implements Use of Virus-Guard to Protect Passengers Against Global Health Threats

Date: 29 August 2016

Leader in Revolutionary Infection Control for the Aviation Industry Adds New Gulf Airline to Roster of Clients amid Zika Virus Concerns.

Oman Air, the national carrier of the Sultanate of Oman, has announced joining a long list of major aviation leaders who now use Virus-Guard's disinfectant wipes. Designed for protection against swine flu, H1N1, H7N9, Ebola, Mers and Zika, Oman Air' staff members currently use the wipes to disinfect aircraft galleys, lavatories and door handles.

"We are committed to maintaining a healthy and safe environment for our passengers and employees," said Miguel Serra, Vice president of ground operations at Oman Air. "Our partnership with Virus-Guard helps to ensure that we are taking all of the necessary steps and precautions for swift and coordinated action against international health threats."

In February, Oman Air announced that its leadership was monitoring the Zika virus situation in South America, posting additional information on its website from the World Health Organization and offering refunds and rebooking assistance to pregnant women scheduled to travel to the region.

Oman Air's use of Virus-Guard products is one of several necessary steps the airline is taking to minimize the threat of the Zika virus, as well as reduce the risk of the spread of this and other viruses and bacteria.

Virus-Guard disinfectant wipes are a ready-to-use product that provides long-term efficacy, and is an easy-to-use solution for eradicating germs. The wipes contain benzalkonium chloride, sodium pyrithione and polycondensates, a combination commonly used in hospitals and other medical treatment facilities. The wipes do not contain aldehyde or phenol.

Virus-Guard disinfectants are also available in a 500-milliliter spray bottle, five-liter canister and nebulizer. All Virus-Guard products are, biocompatible, approved for Airbus, Boeing and boast a long-time antimicrobial effect.

"The number of infections by micro-organisms has grown tremendously," said Alex, founder of Virus-

Guard. “We are working diligently with our aviation industry partners to implement infection control measures and protocols. Our goal is to help these industry leaders to quickly adapt in order to continue to make customer safety their top priority.”
